Cherry Hill Interiors

1, 2, and 3 emissions in line with ISO 14064 and the GHG Protocol, and through measures such as logistics optimisation, mobility planning, and responsible travel, we cut our value-chain emissions by nearly 24% last year. These efforts have been recognised through the EcoVadis Silver Medal and by Dun & Bradstreet for ESG leadership.

How is Cherry Hill ensuring sustainable and responsible turnkey interior delivery?

At Cherry Hill Interiors, sustainability is integrated into how we design, build, and deliver workplaces—not treated as a standalone initiative. With nearly four decades of experience, we view responsible construction as beginning at design and continuing through the entire project lifecycle. Our teams embed sustainability early by prioritising efficient layouts, durable specifications, and responsibly sourced materials, with growing emphasis on certified products and low-VOC finishes for healthier indoor environments.

Strong governance underpins this approach. Delivering complex corporate interiors requires disciplined procurement, project monitoring, safety, and quality-management systems that ensure transparency, accountability, and ethical execution nationwide.

We also make sustainability measurable. Cherry Hill tracks Scope

How is Cherry Hill reducing project footprints through innovation?

As workplaces evolve, sustainability has become a core expectation. Our role as contractors is to turn these ambitions into practical, buildable solutions.

At Cherry Hill, innovation focuses on improving efficiency without compromising design quality or timelines. We promote low VOC materials, responsibly sourced finishes, and construction practices that minimise waste while maintaining aesthetics.

Modular and prefabricated methods enhance quality and reduce on site material loss, while digital tools such as BIM & RUN PRO (tech enable project management) minimise design conflicts, optimise material use, and tighten schedules. When sustainability and innovation work together, organisations gain workplaces that are visually compelling, efficient, and environmentally responsible.

How is Cherry Hill driving ESG across its supply chain? How is Cherry Hill driving ESG across its supply chain?

Interior construction is highly collaborative, involving architects, manufacturers, contractors, and MSME partners. Meaningful ESG progress must therefore span the entire ecosystem.

Cherry Hill sees itself as both a participant and a catalyst in this transition. Through its procurement processes and long-standing vendor relationships, it promotes responsible sourcing, stronger compliance, improved worker safety, and greater supply-chain transparency.

Many of our partners are MSME-led enterprises that anchor the industry. By working closely with them across projects, we help strengthen quality practices, documentation standards, and awareness of environmental and ethical expectations.

As clients increasingly prioritise ESG outcomes, our role extends beyond delivering sustainable workplaces to elevating the ecosystem that builds them and raising industry standards. ■
