

Sayak Das

Co-Founder & Chief AI Officer
Airolabs.ai

How is Airolabs.ai helping banks and financial institutions deploy governed, compliant, and enterprise-ready AI systems through its AI-native cloud architectures and responsible AI frameworks?

Airolabs.ai, an AI systems integrator, powers major BFSI transformations in India by bridging the legacy-AI divide. We avoid “rip and replace,” syncing systems for a self-healing value chain. Our foundational AI framework uses proven LLMs and SLMs tailored for India, with responsible AI guardrails. For top clients, the Rapid AI Factory delivers from strategy to production in 8-12 weeks. By embedding AI in the SDLC, we slash manual work, enabling banks to launch digital products twice as fast as manual-heavy competitors. Our Regulatory Compliance AI Agents track local mandates autonomously, ensuring every AI decision is 100% auditable and compliant by design.

With rising adoption of GenAI, LLMOps, and intelligent automation in BFSI, how does Airolabs.ai accelerate

time-to-value for financial institutions—especially through its 30+ enterprise-ready accelerators that deliver faster deployment, improved efficiency, and measurable ROI?

Airolabs.ai ramps up value for BFSI companies by rolling out GenAI, Agentic AI, and intelligent automation at scale, thanks to our proprietary Foundational AI framework and Rapid AI Factory model. We tap into over 30 enterprise accelerators—like RAG-first setups and multi-agent systems—for fast results: front-office virtual assistants that supercharge customer interactions, mid-office risk management, and back-office smart processes that slash IT expenses through hands-free jobs like bank reconciliations. Weaving AI into the SDLC cuts down on manual coding, so banks can push out rugged, compliant digital offerings twice as quickly as those bogged down by old-school methods.

As cyber threats intensify across digital banking, payments, and financial services, how is Airolabs.ai integrating cloud security, threat intelligence, data privacy, and DevSecOps to help BFSI clients build resilient, secure, and compliant AI-driven ecosystems?

Airolabs.ai strengthens BFSI setups by threading “Governance-by-Design” right into the heart of digital operations, alongside Zero Trust

Architecture. Security gets baked straight into our AI-SDLC process, where we automate every single test case and compliance check—ensuring fairness, bias detection, and PII protections are locked in before anything goes live. Our self-running Reg-Intel Agents keep tabs on local regulations around the clock, handing over complete audit logs to bodies like the RBI. By meshing multi-cloud defenses with high-volume AI, we help build tough, self-repairing systems that crush those tough 2026 compliance and data sovereignty demands. ■
