

**Dr. Bondada Raghavendra Rao**

Chairman & Managing Director  
Bondada Group

### How has your company evolved since its inception, and what key transformations have been pivotal to your growth?

Bondada Engineering began its journey in 2012 as a Telecom EPC and O&M company with INR 7 crore in revenue. Over time, we have transformed into a diversified infrastructure company with a turnover of INR 1,571 crore in FY 2025, achieving a CAGR of 56%. Today, we operate across telecom, renewable energy, railways, eco-friendly building materials, industrial LED lighting, and BLDC motors.

Three key transformations have been pivotal to our growth. First, our strategic entry into solar EPC and O&M aligned us with India's clean energy goals. Second, securing the INR 1,156 crore BSNL 4G saturation project demonstrated our execution capabilities in large-scale infrastructure. Third, our public listing on the BSE SME platform in 2023 enhanced transparency, brand value, and shareholder confidence.

These milestones strengthened our ability to secure large orders, helping us build a robust order book of INR 14,000 crore today.

### How does your company contribute to strengthening India's position as a global economic force, particularly in alignment with the 'Atmanirbharta' vision?

Bondada Engineering strongly supports the **Atmanirbhar Bharat** mission by delivering indigenous infrastructure and technology solutions. As India targets 500 GW of non-fossil fuel energy by 2030, we aim to build 10 GW of renewable energy assets to contribute meaningfully to national clean energy goals.

Our projects help drive industrial growth and India's long-term economic resilience. We are also enabling the country's digital transformation through telecom infrastructure that expands 4G and 5G connectivity in rural and underserved regions.

Additionally, we manufacture indigenous products like solar module mounting structures, BLDC motors, and energy-efficient LED lighting systems. These initiatives reduce import dependence, empower local suppliers, generate rural employment, and strengthen domestic value chains.

### What is your company's growth strategy for the next 3-5 years, and how does it align with the evolving business landscape?

Our strategy focuses on scaling renewable energy and achieving \$1 billion in revenue by 2030. We are building a 10 GW renewable portfolio, spanning solar, Battery Energy Storage Systems (BESS), Pumped Storage, and Green Hydrogen.

A recent 2 GW land allocation under Andhra Pradesh's Clean Energy Policy will expand our IPP portfolio and asset base. We are also growing in the railway sector, building telecom infrastructure for the Kavach safety system – leveraging our expertise to further support India's infrastructure ambitions.

Our roadmap reflects our commitment to sustainable growth and long-term shareholder value. ■
