Director
Ansec Human Resource Services
Pvt. Ltd.

intensive function. How is ANSEC changing that conversation through technology and data-driven operations?

That perception extends beyond security to the entire integrated facility management industry. Every property requires security, housekeeping, technicians, plumbers, property heads, and other support personnel. This manpower will remain essential, even as technology becomes increasingly important.

Our goal is not to replace people, but to empower them. Building management systems, access control, visitor management, digital patrol and audit tools, AI-powered CCTV, intrusion and asset tracking, and live dashboards turn daily operations into measurable data.

Our operations application records activities and critical electrical, water, HVAC, safety, and fire-system data for faster, data-driven decisions. Thermography testing and shutdown audits identify risks before they cause failures or hazards. These assessments have helped clients achieve British Safety Council audits, ISO certifications, and other recognized safety standards.

Dedicated training centers and our online Learning Management System provide role-specific learning at training centers, client sites, or home, supporting continuous learning and

consistent standards. Our compliance portal gives clients real-time access to attendance, invoices, personnel KYC, and compliance reports.

This combination of skilled people, technology, training, and transparency is increasingly important across data centers, renewables, defense, manufacturing, and large-scale real estate.

What has helped ANSEC maintain consistent service standards while expanding across multiple states and industries?

Our people and their discipline are central to consistent delivery. Field teams, managers, auditors, CRM teams, and trainers work as one chain, while ex-servicemen reinforce integrity, administrative capability, and a strong sense of duty.

Clients operating to global standards have raised our benchmarks, particularly as Global Capability Centers and international companies expanded in India. Much of our geographic growth has been client-led, with clients trusting us to support them in new states.

Standard operating procedures, training centers, our LMS, operations application, and compliance portal help us maintain consistent standards everywhere. For us, growth means carrying our standards and clients' trust wherever we operate.

How has ANSEC expanded from security services into integrated facility management while retaining its core security expertise?

ANSEC began in 2006 with a simple promise: to deliver exceptional service. As we grew, we realised clients were not looking merely for vendors, but partners who could take ownership of their premises. That insight shaped our expansion into integrated facility management. We brought in experienced specialists across residential, commercial, IT and industrial environments.

Today, expectations have moved beyond manpower towards "man-tech" solutions. Clients want visibility, measurable performance and faster response. We are therefore steadily integrating technology across our services while ensuring skilled, well-trained people remain at the centre of delivery.

Many organizations still see security as a manpower-
